

PyRuby

Today I saw a package called PyRuby in Github. The readme says:

```
ΠψΡυβψ – Σομε Ρυβψ φορ ψουρ Πψτηον!  
ΠψΡυβψ ις α σιμπλε ωαψ το λεωεραγε της ποωερ οφ Ρυβψ τ  
  
Υσαγε  
Αλλ ψου ηαωε το δο ις ιμπορτ της ρυβψ μοδυλε:  
  
ιμπορτ ρυβψ  
Φρομ νοω ον ψου σιουλδ βε αβλε το ωριτε Ρυβψ χοδε ωιτη  
  
1.υπτο(10) { |ν| πυτσ ν }
```

Even PyPI has listed this as a package.

In the beginning I thought this was again a Ruby implementation by PyPy project. Or at least it use some

magic trick to write ruby code directly in Python.

Then I browse into the source code of it.

It contains only one file: `ruby.py`

[illegible]

[illegible]

Yes, indeed. The idea of using Ruby in Python is totally mad.
