Let it be Pelican

◆□□ ○I □**>■** ◆▲*§ <u>☆*●**\$■</u> □��*□▲ ○* ▲□○* ��*◆��■▼��**▲ □◆*□ ★*▼□□□*▲▲+

- 1. Implemented in *pure Python*. This means that I can use different implementation of Python other than CPython easily. I use <u>PyPy</u> myself.
- 2. Translation of multi-languages. The original

- author of <u>Pelican</u> is a France. This is unnecessory for most people, but I will post my blog mainly in three languages: English, Japanese and Chinese.
- 3. ReST . So that I can use the @auto-rst feature of Leo . And also I don't need to switch between my blog and documentation of my projects.

- 1. Support of pelican-import from WordPress for Chinese and Japanese articles are buggy.
- 2. Datetime format, timezone, and locale support for multi-language blogs are not so natural. *I will work on this in these days*
- 3. There are not so many templates compared to Octopress.
- 4. And less plugins.

My settings

ΤΙΜΕΖΟΝΕ = ϶Ασια/Τοκψο϶
